Introduction

Wireless high-speed Internet access is quickly becoming a service that business travelers as well as consumers are expecting at hotels, convention centers, and other hospitality establishments. Hospitality management sees broadband wireless access as a way to maximize occupancy, increase customer satisfaction.

Wireless or wired, HATAM provides secure high speed internet connectivity to your business. Our solutions include Marina WiFi, Hotel WiFi, Conference Center Internet and Pub / Hospitality, Health-care, Sports Venue, Town and Community, and Holiday Park Wi-Fi systems. We supply a complete solution, from our own designed **NetHAT** Wi-Fi billing and management system, network monitoring platform, payment processing systems and content management systems.

How WiFi Software Works:

Upon accessing your hotspot, guest is automatically redirected to your self-branded login page (captive portal). To get the Internet access, guest may login with an existing account or signup for your services: by paying with a credit card or PayPal, by charging the bill on the room number, or by enter a voucher ticket. **Entire profit is 100% yours.**

NetHAT Features

Advertise Your Business with your own Wi-Fi Start Page. When people connect to your Wi-Fi signal, they are redirected automatically to your Hotspot Start Page (called Splash Page).

Your Branding - Customize the login page with your company branding and logo for a more professional look and feel.

Data Capture - you can customize what fields you require from your customers. You can request email, phone number, other personal data, or you can even create up to 15 custom question which your customers need to fill out (like feedback).

Facebook - While giving out free Wi-Fi, you can Promote your own Facebook Page, get new "LIKES" and social recommendations from your customers. This increases your business' visibility, customer engagement and sales.

SMS Text - Authorize your Customers via their Mobile Phone. You can collect phone numbers for advertising or legal purposes (you can track people in case of illegal activities in your hotspot).

Vouchers - Use Vouchers to Limit guest Accesses. You can distribute Vouchers to limit the access to the internet.

Create Powerful Reports - you can create purchase reports and break it down by date or period, location and type of payment (Credit Card, PayPal, Pre-Paid). A chart is also generated to give you a clear visual overview.

Stats - User Search, Usage Information. You can find out how many times a user logged in, how much time did he/she spend online, how much traffic did he/she downloaded and uploaded. You can also see the MAC address(es) of his/her computers.

Multi-language Start Pages - your Hotspot start pages are available in multiple languages, including German, spanish, french, Portuguese, Italian and Hungarian. We'll add more languages in the future.

Not just for Wi-Fi - The system is not made for Wi-Fi only. You can easily connect desktop computers or kiosks so people without laptops can also use your Internet Hotspot. For example, you can easily start an Internet Cafe.

System Alert - You can monitor your network and get alerts if something is wrong.

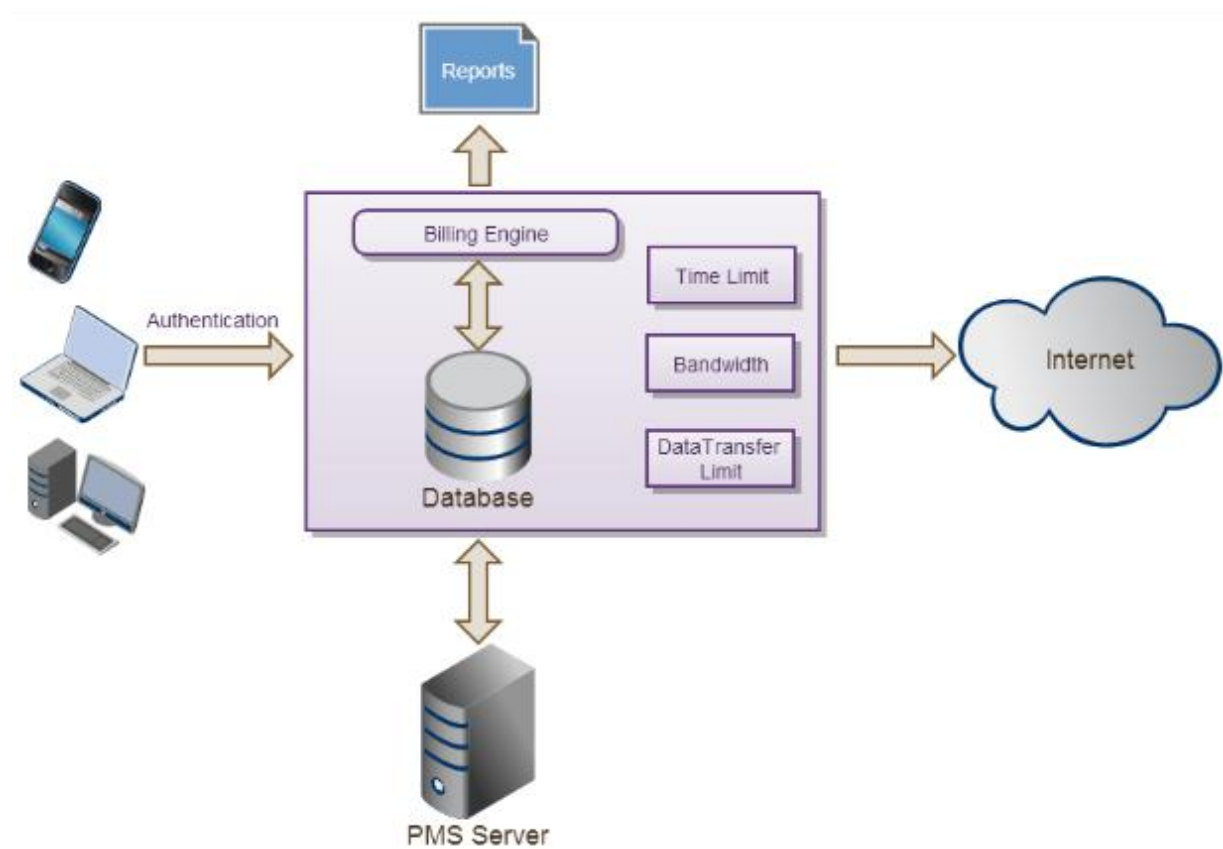

We have dedicated ourselves to providing the best service in industry and can bring the wonderful world of wireless internet to your customers instantly and cost effectively. Most importantly this can be a profit center for your business.

A professional WiFi hotspot billing solution. Web based administration

- √ Customisable login page
- √ Limit download & upload speed per user (Bandwidth Management)
